A Rack-Mount Static Transfer Switch (STS) is a device used to ensure uninterrupted power supply (UPS) by automatically transferring electrical load between two power sources. It is designed to be installed in a 19-inch server rack and is typically used in data centers, telecommunication rooms, and other mission-critical environments where power continuity is essential. The primary function of an STS is to quickly switch between power sources in the event of an issue with the primary power supply, such as a power outage, voltage fluctuations, or other faults. This ensures that the connected devices continue to operate without interruption.
