The global Rack and Chassis Manifold market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Rack and chassis manifolds are coolant distribution systems for servers and data centres, primarily made of stainless steel. They are designed to efficiently distribute coolant to multiple cooling components within the server to ensure efficient thermal management and a stable operating environment. Manifolds typically include multiple inlets and outlets to accommodate different cooling needs. Key upstream raw materials are stainless steel and sealing materials such as EPDM and PTFE. Downstream customers mainly include large-scale data centre operators, cloud service providers, computer hardware manufacturers, and research institutions, all of which require efficient cooling solutions to safeguard equipment performance and reliability. Currently, as the demand for high-performance computing and cloud computing continues to grow, liquid cooling technology is becoming an important cooling solution for data centres. Stainless steel rack and chassis manifolds are favoured by the market due to their excellent corrosion resistance and mechanical strength.
