The global Radar Altimeter (RadAlt) market size is predicted to grow from US\$ 130 million in 2025 to US\$ 191 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

A Radar Altimeter (RadAlt) is a precise aviation instrument that measures an aircraft's altitude above ground level (AGL) by emitting radio waves directly downward and analyzing the time it takes for the signals to reflect back from the terrain. Unlike barometric altimeters, which measure altitude relative to sea level, radar altimeters provide real-time, accurate measurements critical for low-altitude flight, landings, and terrain awareness. Commonly used in commercial, military, and UAV applications, RadAlts are vital for enhancing flight safety, especially in poor visibility conditions. Modern RadAlts are designed to resist interference, including challenges from 5G networks, and comply with stringent aviation standards.

United States market for Radar Altimeter (RadAlt) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
