Radio frequency energy in radar is transmitted in short pulses with time durations that may vary from 1 to 50 microseconds or more. In order to generate this short pulse of high power, a special modulator is required which generates a high voltage for the transmitter tube at the moment of transmission. This radar modulator switches on the anode voltage for the high power tube for the duration of the pulse. Therefore it is sometimes called “keyed on/off” radar modulator.

United States market for Radar Modulator is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Radar Modulator is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
