A radar sensor is an electronic device that identifies the position and velocity of a distant object such as a vehicle, aircraft, or ship. Radar sensors identify electromagnetic emissions with the help of radio receivers. When the transmission is detected, the person in the vehicle is informed. Currently, the GPS technology is installed into radar sensors, and it aids the storage of locations indicated by the sensor when the user reaches their destination in addition to detecting objects, the radar sensors provide information such as range, speed, direction, and Doppler velocity.

North America is expected to hold the largest share of the radar sensor market in 2023; the market in APAC is expected to grow at a high rate between 2018 and 2023. The increased focus on safety and security features in the automobile sector in China, India, and Japan is the major factor driving the growth of the radar sensor market in APAC.
