Radar Warning Receiver (RWR) systems sense the radio emissions of radar systems. Their primary application is to issue a warning when a radar signal is detected as a threat (such as, a police speed detection radar or a fighter jet's fire control radar). The warning is then transmitted, manually or automatically, to evade the detected threat. RWR systems can be installed in all kind of airborne, ground-based, and sea-based vehicles.

The global Radar Warning Receiver market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
