Radial Lead Type Film Capacitor is a capacitor that uses plastic film as dielectric material and has radial leads. This type of capacitor usually uses a plastic film with metallization on both sides as electrodes, and the electrode material is covered on the plastic film and then wound. The radial lead type means that the two leads of the capacitor are led out from its bottom and are distributed radially. Film capacitors have excellent insulation performance, low loss, high stability and high withstand voltage, and are widely used in various electronic circuits.
