Radial Lead Type NTC Thermistor (Lead Type Negative Temperature Coefficient Thermistor) is a temperature-sensitive electronic component with a radial lead design, whose resistance value decreases significantly as the temperature increases. The NTC (Negative Temperature Coefficient) characteristic makes it suitable for accurate temperature measurement and control. The radial lead design of this thermistor is easy to install and connect, and it also has the characteristics of fast response, high sensitivity, and compact structure. Its main body is usually made of semiconductor ceramic material, and the outside is coated with a protective layer to improve durability and stability. It is a common temperature detection and protection component in many industrial and consumer electronics fields.
