The global Radiation Detection market size is predicted to grow from US$ 1951 million in 2025 to US$ 2360 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Radiation Detection In Medical and Healthcare report mainly focuses on dosimetry equipment, The dosimetry equipment is of fundamental importance in the disciplines of radiation dosimetry and radiation health physics and is primarily used to estimate the radiation dose deposited in an individual wearing the device. Due to the particularity of the dosimeter product, many players in the market earn money not only through the sales of dosimeters but also with service at the same time. For the OSL dosimeters, the products can be reused even for more than 10 years, so major players often package products and services for sale. So in this report we measure the market mainly through the products and service revenue segment.

The industry's leading producers are Landauer, Mirion Technologies and CHIYODA TECHNOL CORPORATION, which accounted for 21.45%, 13.13% and 11.09% of revenue in 2023.
