According to our LPI (LP Information) latest study, the global Radiation Dose Monitoring market size was valued at US\$ 1961 million in 2023. With growing demand in downstream market, the Radiation Dose Monitoring is forecast to a readjusted size of US\$ 2717.6 million by 2030 with a CAGR of 4.8% during review period.

The research report highlights the growth potential of the global Radiation Dose Monitoring market. Radiation Dose Monitoring are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Radiation Dose Monitoring. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Radiation Dose Monitoring market.

Radiation Exposure Monitoring is a framework developed by Integrating the Healthcare Enterprise, for utilizing existing technical standards, such as DICOM, to provide information about the dose delivered to patients in radiology procedures, in an interoperable format.

The growing adoption of EHR systems, increasing initiatives for the implementation of health information exchanges (HIEs), growing awareness on radiation safety, increasing radiation exposure to patients, and increasing number of diagnostic imaging exams across the globe are other factors driving the growth of the radiation dose management market. However, the lack of in-house education and training on radiation dose management, lack of understanding amongst physicians and technologists towards

dose optimization approaches, and low adoption of radiation dose management solutions in emerging countries are some of the factors restraining the growth of this market.
