The global Radiation Dosimetry Service market size is predicted to grow from US\$ 1442 million in 2025 to US\$ 2578 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

Radiation dosimetry is a professional service that measures and assesses the radiation dose received by individuals or objects. This service is essential to ensure the safety of workers and the public, especially in industries and locations that involve radioactive materials or radiation equipment.

??Intelligent and real-time??: Integrate AI algorithms and IoT sensors to achieve real-time monitoring of radiation dose data and abnormal warning (such as automatic alarms in key areas of nuclear power plants).

??Miniaturization and wearable devices??: Develop portable personal dosimeters (such as smart badges and bracelets) to meet the mobile monitoring needs of high-risk workers (such as medical radiology departments and nuclear industry sites).

??Cloud big data platform??: Generate personalized health reports (such as cumulative radiation exposure assessments for astronauts and nuclear power plant employees) by storing and analyzing long-term dose data in the cloud.

??Multimodal fusion detection??: Combine multiple types of radiation detection technologies such as photons, neutrons, and electrons to improve measurement accuracy in complex environments (such as space and nuclear fusion experiments).

??Regulatory-driven and global certification??: Comply with the regulatory standards of

the International Atomic Energy Agency (IAEA) and various countries (such as the US NRC and the EU EURATOM), and promote the global expansion of services (such as China's 'Belt and Road' nuclear power project export support).
