Radiation emergency medications are pharmaceuticals used to treat individuals exposed to ionizing radiation during radiological or nuclear emergencies. Exposure to high levels of ionizing radiation can occur in incidents such as nuclear accidents, radiological attacks, or industrial accidents involving radioactive materials. Radiation can cause severe damage to cells and tissues, leading to acute radiation syndrome (ARS) or radiation sickness.

These medications aim to protect cells and tissues from the harmful effects of radiation. They can help minimize radiation-induced damage by scavenging free radicals and reducing oxidative stress. They can help reduce the severity of symptoms and improve

outcomes for individuals exposed to radiation.
