The report requires updating with new data and is sent in 48 hours after order is placed.

The radiation monitoring system (RMS) continuously measures the radiation level in the selected area and process. These radiation measurements are displayed locally and in the control room so that plant operators can understand the current radiation status. This helps them assess the condition of the factory and take appropriate measures in two situations: mitigating the consequences of factory incidents and preventing unintentional release of radiation, thereby protecting the health and safety of the public and factory personnel.
