The global Radiation Therapy Planning System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Treatment planning systems are at the heart of radiation therapy (RT) and the key to improved patient outcomes. Once image datasets are loaded and the tumors are identified, the systems develop a complex plan for each beam line route for how the therapy system will deliver radiation. The software also computes the expected dose distribution in the patient's tissue, including variables such as tissue energy level penetration influenced by the type of tissue the beam lines encounter (e.g., bone or lung vs. muscle). These systems also help navigate beam placement based on avoiding critical structures that are more sensitive to radiation in an effort to reduce collateral damage from the therapy. This may include automated, complex programming for multi-leaf collimator (MLC) leaf sequencing to shape the beam around critical structures during dose delivery. These treatment plans can also be modified to compensate for the reduction in tumor size over the course of treatments.

The global radiation oncology market size was estimated at USD 9.15 billion in 2022 and is expected to grow at a compound annual growth rate (CAGR) of 12.4% from 2023 to 2030. Radiation therapy is one of the three major technical means to treat malignant tumors. It uses radiation to irradiate and kill tumor tissue cells to achieve the purpose of treatment. Radiation therapy has high requirements on dose control and concentration. In order to achieve higher treatment accuracy, faster treatment speed and realize personalized treatment, precision radiotherapy has been proposed. The radiation is concentrated on the lesion and the dose is increased as much as possible. The rays irradiated by the surrounding normal tissues and organs are reduced as much as

possible, which has the advantages of high precision, good curative effect, short time, and small side effects. In the context of precision radiotherapy, radiotherapy planning systems are indispensable, and the market space continues to grow.
