Radicava is an intravenous medication used to help with recovery following a stroke^[1] and to treat amyotrophic lateral sclerosis (ALS).

The Radicava market is driven by the need for effective treatments for amyotrophic lateral sclerosis (ALS), a progressive neurodegenerative disease. Radicava, containing edaravone, is an intravenous medication that has been shown to slow the decline in physical function in ALS patients. The drug's approval and positive clinical outcomes have led to its increasing adoption in ALS management. However, challenges include the high cost of the medication, the need for ongoing treatment, and access barriers in certain regions. Overcoming these challenges through affordability measures, patient support programs, and continued research to better understand and treat ALS will be crucial for the sustained growth of the Radicava market.
