The global Radioactive Isotopes market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A radioactive isotope, or radioisotope, is an unstable form of an element that emits radiation in an attempt to return to a more stable form.

Isotopes are versions of the same element with the same atomic number but a different atomic mass. Stable isotopes have a close enough number of protons and neutrons that the nucleus itself will be balanced.
