The global Radioactive Waste Storage Tank market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Radioactive waste storage tanks are containers used to store radioactive waste generated by nuclear power plants, medical facilities, and other industries that use radioactive materials. The design purpose of these storage tanks is to safely contain waste and prevent it from polluting the environment or harming humans. Radioactive waste storage tanks can be made of various materials, including stainless steel and concrete, ranging in size from small containers to large tanks that can hold millions of gallons of waste. They are typically located in nuclear power plants and other facilities that generate radioactive waste. The waste stored in these tanks can be low-level waste, such as contaminated clothing or tools, or high-level waste, such as spent nuclear fuel. The design purpose of these tanks is to isolate waste from the environment for thousands of years until it decays to a safe level.

United States market for Radioactive Waste Storage Tank is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
