The global Radiofrequency Ablation-assisted System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The radiofrequency ablation auxiliary system is a medical equipment system that integrates multiple components such as radiofrequency host, electrode needle device, electrode sheet module, perfusion pump, remote control, foot switch, cable, etc. The system uses the heat energy generated by high-frequency electric energy to destroy abnormal tissues in the body or reduce their functions. It is particularly suitable for cardiac radiofrequency ablation treatment, tumor treatment, cosmetic medicine, and neurological disease treatment. The working principle of the radiofrequency ablation auxiliary system is based on the thermal effect generated by high-frequency electric energy. The radiofrequency power supply generates high-frequency current, which is transmitted to the human body through the catheter. The electrode releases high-frequency electric energy, forms a radiofrequency electric field in the body, and exchanges heat with the surrounding tissues. High-temperature energy destroys the structure and function of target tissue cells through thermal effects to achieve the therapeutic effect.

United States market for Radiofrequency Ablation-assisted System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
