According to this study, the global Radiofrequency Identification (RFID) market size will reach US\$ 8463 million by 2031.

Radio Frequency Identification (RFID) System refers to a wireless system comprised of two components: tags and readers. The reader is a device that has one or more antennas that emit radio waves and receive signals back from the RFID tag. Tags, which use radio waves to communicate their identity and other information to nearby readers, can be passive or active. Passive RFID tags are powered by the reader and do not have a battery. Active RFID tags are powered by batteries.
