Industrial radiographic inspection (RT) services are professional technical services provided by third-party service providers with qualified personnel, radiation safety permits, inspection equipment, shielding facilities, and quality management systems. These services utilize X-rays, gamma rays, or high-energy rays to penetrate welds, castings, forgings, composite materials, pressure equipment, pipes, and other industrial components. The internal attenuation differences are recorded using industrial film, computed tomography (CT) imaging panels, digital detectors, real-time imaging systems, or computed tomography systems to identify internal defects such as porosity, inclusions, cracks, incomplete penetration, lack of fusion, shrinkage cavities, corrosion, wall thickness loss, foreign objects, and assembly anomalies.
