A radiometric level measurement system is a method used to determine the level of a substance (liquid or solid) in a container or vessel using a radioactive source and a detector. In this system, a radioactive source, such as gamma or beta emitters, is placed on one side of the vessel, and a detector is positioned on the opposite side. As the radiation passes through the substance, it will be partially absorbed, scattered, or reflected. The detector measures the intensity of the radiation that reaches it, and this measurement is used to calculate the level of the substance.
