A Radiopharmaceuticals Dispensing System (RPDS) is a specialized automated system used in nuclear medicine departments and radiopharmacies to safely handle and dispense radiopharmaceuticals.

Radiopharmaceuticals are radioactive drugs that contain a small amount of a radioactive material. These drugs are used in nuclear medicine procedures to diagnose or treat various medical conditions. Since they contain radioactive isotopes, it is essential to handle them with great care to ensure the safety of patients, healthcare

workers, and the environment. The Radiopharmaceuticals Dispensing System is designed to automate the process of compounding and dispensing radiopharmaceuticals accurately.

The radiopharmaceuticals market had been experiencing steady growth and significant interest due to the increasing use of nuclear medicine procedures for diagnostic and therapeutic purposes. Radiopharmaceuticals are essential tools in nuclear medicine, and they play a crucial role in diagnosing various diseases, such as cancer, cardiovascular conditions, and neurological disorders.

The radiopharmaceuticals market had been growing steadily over the years. Factors contributing to this growth include advancements in radiopharmaceutical development, rising prevalence of cancer and cardiovascular diseases, and an aging population that drives the demand for diagnostic procedures.
