## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Rail transit ticket vending machines are automated devices that are usually located in public transportation facilities such as subway stations or light rail stations to facilitate passengers to purchase tickets or subway cards. These ticket machines typically have a touch-screen interface that allows passengers to choose the type of ticket to purchase, the number of tickets, and how to pay. Payment methods usually include cash, bank cards, and mobile payment methods that have become increasingly popular in recent years, such as mobile payment or QR code payment. The emergence of automatic ticket vending machines allows passengers to purchase tickets more conveniently, reduces the waiting time at the manual ticket window, and improves overall service efficiency. In addition, the automatic ticket vending machine can also provide ticket sales services 24 hours a day, making it convenient for passengers who need to travel at unusual times. With the development of technology, some advanced automatic ticket vending machines may also have more functions, such as voice navigation, voice recognition, face recognition, etc., to provide a more intelligent and convenient ticket purchasing experience.
