The global Railway Electrification Systems market size is predicted to grow from US\$ 17100 million in 2025 to US\$ 18640 million in 2031; it is expected to grow at a CAGR of 1.5% from 2025 to 2031.

A railway electrification system supplies electric power to railway trains and trams without an on-board prime mover or local fuel supply. Electric railways use either electric locomotives (hauling passengers or freight in separate cars), electric multiple units (passenger cars with their own motors) or both. Electricity is typically generated in large and relatively efficient generating stations, transmitted to the railway network and distributed to the trains.

China is the largest Railway Electrification Systems market with a market share of nearly 27%. Germany is the second largest market.

The contact lines system has the highest market share, accounting for nearly 70% of the market share.

CREC, CRCC, Siemens, Alstom and Hitachi are the main players in this market.
