Railway Gearbox refers to a mechanical device used in locomotives and rolling stock for transmitting power from the engine to the wheels. It consists of a series of gears and shafts enclosed in a housing, and its main function is to change the speed and torque of the power being transmitted. The gearbox ensures efficient and reliable transmission of power, allowing the train to achieve different speeds and handle various conditions like climbing hills or maintaining constant speed on flat tracks. It is a critical component that contributes to the smooth and safe operation of railway vehicles.
