## Abstracts

The global Railway High Temperature Cables market size is predicted to grow from US\$ 322 million in 2025 to US\$ 403 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

Cables working in high temperature environments. Ordinary cables are prone to insulation aging and scorching at high temperatures, and the cables lose their performance and cannot be used due to damage. The high temperature cable can work normally and stably at the rated high temperature, the signal or power transmission performance will not be affected, and it can also ensure that the cable has a long service life.

According to the data of China Association of Metros, by the end of 2022, 55 cities in mainland China have opened urban rail transit and 308 operating lines. The total length of operating lines is 10287.45 km, ranking first in the world and accounting for 26.2% of the total global mileage. 1080.63 km of new operating lines were added in 2022. By the end of 2022, 545 cities in 78 countries and regions will have opened urban rail transit, with more than 41,386.12 km of operational mileage. Compared to 2021, the total mileage of urban rail transit worldwide would increase by 4,531.92 km, an increase of 11.0%, of which 1,293.45 km of subway mileage, 788.11 km of light rail mileage and 2,450.36 km of tram mileage would increase, accounting for 28.5%, 17.4% and 54.1% of the total increase respectively. With the continuous growth of global railway transportation, there is a rising demand for high-temperature cables in railway applications. These high-temperature cables exhibit excellent heat resistance, enabling them to operate reliably under extreme high-temperature conditions, making them crucial components within railway systems. As urbanization and transportation networks expand, railways play a critical role, implying that the demand for high-temperature

cables is poised to continue its upward trajectory. Market trends in high-temperature cables indicate that manufacturers are consistently improving their technology to provide products that are more heat-resistant, durable, and safe to meet the needs of railway systems.
