The global Railway Power Supply System Testing Equipment market size is predicted to grow from US\$ 874 million in 2025 to US\$ 1267 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Railway traction power supply equipment is an important guarantee for the smooth and safe operation of railways. Once equipment failure occurs, it will have a huge impact on the normal operation of railways. Traction power supply equipment is placed in an open-air environment, so it is easily affected by external environmental factors. When the equipment fails or the power supply equipment burns out, the train power supply will be terminated, and it is easy to cause safety accidents. Therefore, it is very necessary to do a good job in the detection and monitoring of traction power supply equipment.
