The global Railway Trains Traction Motor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Railway trains traction motors are electric motors used to provide propulsion to locomotives and railway vehicles. These motors play a crucial role in converting electrical energy into mechanical energy to move trains. They are typically powered by electricity from overhead lines (catenary system) or an onboard diesel generator. Traction motors are integral components of electric and diesel-electric locomotives and are found in multiple units, trams, and some high-speed trains. The market for railway trains traction motors is closely tied to the railway industry's growth and modernization efforts.

According to the data of China Association of Metros, by the end of 2022, 55 cities in mainland China have opened urban rail transit and 308 operating lines. The total length of operating lines is 10287.45 km, ranking first in the world and accounting for 26.2% of the total global mileage. 1080.63 km of new operating lines were added in 2022. By the end of 2022, 545 cities in 78 countries and regions will have opened urban rail transit, with more than 41,386.12 km of operational mileage. Compared to 2021, the total mileage of urban rail transit worldwide would increase by 4,531.92 km, an increase of 11.0%, of which 1,293.45 km of subway mileage, 788.11 km of light rail mileage and 2,450.36 km of tram mileage would increase, accounting for 28.5%, 17.4% and 54.1% of the total increase respectively.
