Rainfastness adjuvant refers to a type of additive or formulation that is designed to enhance the rainfastness of agricultural pesticides or herbicides. Rainfastness refers to the ability of a pesticide to remain effective even after exposure to rainfall or irrigation. When pesticides are sprayed onto plants, they can be susceptible to being washed off or diluted by rainfall. This can reduce their effectiveness in controlling pests or weeds. Rainfastness adjuvants are used to address this issue by increasing the adhesion of the pesticide to the plant surface, ensuring it stays in place even when exposed to water.
