Rapid Fixer is a high-efficiency photographic fixing solution used in traditional film and black-and-white paper processing, typically formulated with ammonium thiosulfate as the primary fixing agent. Compared with conventional sodium thiosulfate-based fixers, rapid fixers provide significantly faster fixing times, higher processing efficiency, and improved image clarity and long-term stability by quickly removing unexposed silver halide from the emulsion. Rapid Fixer is widely used in professional darkrooms, commercial photo laboratories, and high-throughput imaging environments, where fast processing speed, operational efficiency, and consistent image quality are critical. In 2025, global Photographic Fixer production reached approximately 3000 MT, and average price was 25000 usd/MT .
