The rapid tissue cell disruptor is a laboratory device specially designed for efficient lysis of plant and animal tissues, cell suspensions, and microbial samples. The device uses physical means such as mechanical vibration, ultrasound, pressure, grinding, or high shear to quickly break the cell membrane or cell wall, thereby releasing target components such as nucleic acids, proteins, and metabolites. It is suitable for pre-treatment processes such as DNA/RNA extraction, protein analysis, and pathogen detection. Compared with traditional manual grinding or homogenizers, the rapid tissue cell disruptor has the advantages of high degree of automation, simple operation, high processing efficiency, and good repeatability. It is especially suitable for experimental needs with large sample volumes and diverse sample types (such as plant leaves, animal tissues, fungi, bacteria, algae, etc.).

United States market for Rapid Tissue Cell Disruptor is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
