Rare earth hydrogen storage materials used in nickel-metal hydride (Ni-MH) batteries are alloys composed of rare earth metals (such as lanthanum and cerium) combined with other metal elements (such as nickel, cobalt, and titanium). These alloys exhibit excellent hydrogen absorption and desorption capabilities. Rare earth hydrogen storage materials enable stable hydrogen storage and release during the battery's charge and discharge cycles, improving the energy density, cycle life, and safety of the battery. They are widely used in hybrid electric vehicles and some energy storage systems, playing a crucial role in achieving high performance and long life for Ni-MH batteries.
