The global Rare Earth Permanent Magnetic Components market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Rare earth permanent magnet components are high-performance permanent magnet materials made of rare earth metals and other metal materials, and are widely used in electronics, machinery, energy and other fields. Since rare earth materials have the advantages of high magnetic energy product, high temperature resistance, and corrosion resistance, these components can provide strong magnetic force in a small volume and are suitable for use in equipment that requires high magnetic fields and high efficiency. The main types include neodymium iron boron magnets (NdFeB) and samarium cobalt magnets (SmCo). The former has strong magnetism but slightly poor temperature resistance, while the latter is suitable for high temperature environments.

United States market for Rare Earth Permanent Magnetic Components is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Rare Earth Permanent Magnetic Components is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
