The global Rare Earth Sputtering Target market size is predicted to grow from US\$ 41270 million in 2025 to US\$ 107490 million in 2032; it is expected to grow at a CAGR of 14.9% from 2026 to 2032.

Rare Earth Sputtering Target is an important material, mainly used in the sputtering coating process. It is sputtered and deposited on the substrate under appropriate process conditions through magnetron sputtering and other coating systems to form various functional films. The core part is the target blank. After being hit by ions, the atoms on the surface are sputtered out and deposited on the surface of the substrate to form a thin film.

With the development of electronics, semiconductors, solar energy and other fields, the demand for Rare Earth Sputtering Target continues to grow. This provides a broad market space and development opportunities for the sputtering target industry.
