The global Rare NGR1 Fusion market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

NGR1 fusion, also known as NTRK1 fusion, is a genetic alteration in which the NTRK1 gene fuses with another gene, resulting in an abnormal fusion protein. The NTRK1 gene is part of the neurotrophic tyrosine receptor kinase (NTRK) family, which plays a crucial role in the development and functioning of nerve cells. NTRK1 fusions can lead to uncontrolled cell growth and are associated with certain rare cancer types.

According to the Global Use of Medicines 2023 released by IQVIA Institute, the global drug expenditure in 2022 was about US\$1.48 trillion (excluding COVID vaccine and treatment-related expenses), and it is predicted to grow at a rate of 3%-6% in the next few years. In terms of drug expenditure, this number in China was about 166 billion dollars in 2022. It is expected that the expenditure on medicines will increase in the next few years. From the perspective of demand, the trend of population aging, the increase of residents' wealth and the improvement of health awareness will drive the demand for medicines.
