Anode Grade Petroleum coke is also called Raw Pet Coke (RPC) or Green Petroleum Coke (GPC). Green Pet coke is obtained from the cracking of the fuel feedstock during the crude oil refining process. Green pet coke is further processed to produce Calcined Pet Coke (CPC). Calcined Petroleum Coke is used primarily to produce anodes used in aluminium smelters. CPC is also used in graphite electrode, titanium dioxide, steel, metallurgical, chemicals and other carbon consuming industries. Calcining increases the carbon content (as it decreases the volatile matter) and thereby increases its electrical conductivity. Calcined petcoke has the highest Carbon purity. The quality of Anode Grade pet coke greatly depends on the amount of volatile matter (content of sulfur and metals). Lower sulfur and metal content means purer Anode Grade pet coke.
