RDF processing machine is a specialized equipment used in the production of refuse-derived fuel (RDF) from municipal solid waste (MSW). This machine processes and shreds non-recyclable waste materials into uniform-sized particles or pellets, which can be used as a sustainable alternative fuel source in cement kilns, power plants, or industrial boilers. RDF processing machines help divert waste from landfills, reduce greenhouse gas emissions, and promote resource recovery through energy generation.

The global RDF Processing Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
