## Abstracts

The global RDL AOI Equipment market size is predicted to grow from US\$ 905 million in 2025 to US\$ 1703 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

RDL AOI equipment is a key quality monitoring tool used in advanced packaging. In advanced packaging processes such as wafer-level packaging (WLP), fan-out packaging (FOWLP/FOPLP), and 2.5D/3D silicon/glass interposers, the high-density redistribution layer (RDL) is the core structure for achieving electrical interconnection between chips, and its process yield directly affects the performance and reliability of the final product. As the linewidth of copper RDL continues to shrink to 2/2 micrometers and below, problems such as substrate warping caused by multilayer material stacking, copper grain noise, and the massive amount of data generated by high-resolution scanning make it difficult for traditional inspection methods to achieve both high efficiency and high precision. Therefore, RDL AOI equipment has become an indispensable process control tool for production lines. With a gross profit margin of approximately 60%.

United States market for RDL AOI Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for RDL AOI Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for RDL AOI Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
