Latex Powder or Redispersible Polymer Powder is a free-flowing organic polymer powder, produced through the spray drying of a wide range of monomers such as vinyl acetate, vinyl acetate, ethylene, acrylate, and styrene butadiene. Redispersible Polymer Powder are used mainly in diverse construction chemical applications such as external thermal insulation composite systems, construction and tile adhesives, screed, self-leveling flooring compounds, plasters, repair mortars, grouts, and cementitious sealing slurries. Demand for re-dispersible polymer is continuously increasing due to its benefits in the construction industry such as better water retention and workability, strong strength development of the mortar, higher flexural strength and flexibility, and strong impact and abrasion resistance.
