The global Reach Stacker market size is predicted to grow from US\$ 501 million in 2025 to US\$ 636 million in 2031; it is expected to grow at a CAGR of 4.0% from 2025 to 2031.

A reach stacker is a vehicle used for handling intermodal cargo containers in small terminals or medium-sized ports. Reach stackers are able to transport a container short distances very quickly and pile them in various rows depending on its access.

Reach stackers have gained ground in container handling in most markets because of their flexibility and higher stacking and storage capacity when compared to forklift trucks. Using reach stackers, container blocks can be kept 4-deep due to second row access.

Global Reach Stacker key players include Kalmar, Hyster, Terex, CVS Ferrari, Konecranes, etc. Global top five manufacturers hold a share over 65%.

Europe is the largest market, with a share about 55%, followed by China, and North America, both have a share over 30 percent.

In terms of product, Between 30 -45Tonnes is the largest segment, with a share over 70%. And in terms of application, the largest application is Intermodal Freight Transport, followed by Port Container, etc.
