The global Reaction Steam Turbine market size is predicted to grow from US\$ 6959 million in 2025 to US\$ 9015 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A Reaction Steam Turbine is a type of steam turbine where the rotor blades act as nozzles, and the expansion of steam occurs partially in the stationary nozzles and partially in the moving blades. This design uses both the reactive force of steam as it accelerates through the rotor blades and the pressure drop across both the stationary and moving blades to generate rotational motion. Reaction turbines are typically used in applications requiring high efficiency and smooth operation across a wide range of loads.

The Reaction Steam Turbine market plays a significant role in industries focused on power generation, industrial processes, and mechanical drive applications. These turbines are widely used in utility-scale power plants, including thermal, nuclear, and geothermal plants, due to their high efficiency and adaptability to varying operational conditions.

### Key Market Drivers

**Growing Energy Demand:** The rising global demand for electricity drives the adoption of efficient power generation technologies, including reaction turbines. Efficiency

**Requirements:** Reaction turbines are preferred for their ability to maintain high efficiency in multistage setups, making them suitable for large-scale power generation. **Adoption in Renewable Energy:** The use of reaction turbines in geothermal power plants supports the transition toward cleaner energy sources. **Technological Advancements:** Continuous improvements in turbine design and materials enhance the performance and reliability of reaction steam turbines.

### Market Restraints

**High Initial Investment:** The cost of manufacturing and installing reaction turbines can be significant, particularly for large-scale power plants. **Competition from Other Technologies:** Advances in renewable energy technologies, such as wind and solar, may limit the growth of traditional steam turbine markets.
