According to our LPI (LP Information) latest study, the global Real-time PCR Instruments and Reagents market size was valued at US\$ 4187.9 million in 2023. With growing demand in downstream market, the Real-time PCR Instruments and Reagents is forecast to a readjusted size of US\$ 7070.9 million by 2030 with a CAGR of 7.8% during review period.

The research report highlights the growth potential of the global Real-time PCR Instruments and Reagents market. Real-time PCR Instruments and Reagents are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Real-time PCR Instruments and Reagents. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Real-time PCR Instruments and Reagents market.

In conventional PCR, the amplified DNA product, or amplicon, is detected in an end-point analysis. In real-time PCR, the accumulation of amplification product is measured as the reaction progresses, in real time, with product quantification after each cycle. The main advantage of real-time PCR over PCR is that real-time PCR allows you to determine the initial number of copies of template DNA (the amplification target sequence) with accuracy and high sensitivity over a wide dynamic range. Real-time PCR results can either be qualitative (the presence or absence of a sequence) or quantitative (copy number). Quantitative real-time PCR is thus also known as qPCR analysis. In contrast, PCR is at best semiquantitative. Additionally, real-time qPCR data

can be evaluated without gelelectrophoresis, resulting in reduced bench time and increased throughput. Finally, because real-time qPCR reactions are run and data are evaluated in a unified, closed-tube qPCR system, opportunities for contamination are reduced and the need for postamplification manipulation is eliminated in qPCR analysis.

In Middle East, key players of real-time PCR instruments and reagents include Bioeksen R&D Technologies, Sansure Biotech, Thermo Fisher Scientific, etc. The top three players hold a share about 34%. Egypt is the largest market in Middle East, has around 27% share, followed by Turkey and Saudi Arabia, with about 25% and 18% share, respectively.
