The global Real Time PCR Kits market size is predicted to grow from US\$ 2861 million in 2025 to US\$ 4434 million in 2031; it is expected to grow at a CAGR of 7.6% from 2025 to 2031.

Real-Time PCR has become an increasingly popular technique for analysis of gene expression. There are two primary methods of real-time PCR that can be performed. The first involves including the reverse transcriptase step in the same tube as the PCR reaction (one-step). The second method involves creating cDNA first by means of a separate reverse transcription reaction and then adding the cDNA to the PCR reaction (two-step). There are advantages and disadvantages to both systems that you should consider before choosing the best one for your application, these include the ease of use and cost of reaction to the resulting yield and sequence representation. One-step reactions are certainly easier to set up with less overall hands-on time, but do not provide the flexibility and control that is possible with two-step reactions.

The classification of Real Time PCR Kits includes Two-step Real Time PCR and One-step Real Time PCR, and most of Real Time PCR Kits is One-step Real Time PCR, the proportion of imaging in 2019 is about 63.88%.

Real Time PCR Kits is widely used for the Infectious Disease, Cancer and others. The most proportion of Real Time PCR Kits is used in the Infectious Disease with the proportion is about 68.27% in 2019.

North America is the largest sales place, with a consumption value market share nearly 41.14% in 2019. Following North America, Europe is the second largest sales place with the consumption market share of 26.66%.

Market competition is intense. Roche, Abbott, Agilent Technologies, Qiagen, Thermo Fisher Scientific, etc. are the leaders of the industry, and they hold key technologies and patents, with high-end customers.
