The global Real-time Radiation Dosimeter market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Real-time Radiation Dosimeter is a radiation monitoring device widely used to measure the radiation dose received by an individual or the environment. Radiation dosimeters utilize certain materials that absorb energy after exposure to radiation and store it in a physically measurable electronic excited state. When these materials are heated, the stored energy is released as light, the intensity of which is proportional to the radiation dose received.
