The global Rebar Cutting and Bending Machines market size is predicted to grow from US\$ 1665 million in 2025 to US\$ 2426 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Rebar cutting and bending machines are construction equipment designed to process reinforcing steel bars by cutting them to length and bending them into specified shapes required for concrete reinforcement. These machines are widely used on construction sites, in rebar fabrication yards, and in precast concrete plants to improve processing efficiency, accuracy, and labor safety. From a value chain perspective, upstream activities include steel frames, electric motors, hydraulic systems, control components, and cutting and bending tools, midstream processes focus on machine manufacturing, assembly, testing, and customization for bar diameter ranges, while downstream demand is driven by construction contractors, infrastructure projects, precast concrete manufacturers, and rebar processing centers. In 2025, the average selling price of rebar cutting and bending machines is approximately US\$9,200 per unit, with global sales volume reaching around 185 thousand units. The industry maintains a gross margin of 25%–40%, supported by steady construction demand, equipment replacement cycles, and increasing adoption of mechanized rebar processing.

United States market for Rebar Cutting and Bending Machines is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Rebar Cutting and Bending Machines is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
