The global Rebar Detector market size is predicted to grow from US\$ 127 million in 2025 to US\$ 168 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

Non Destructive Testing (NDT) methods are popular for routine inspection of bridge members. With the ability of new highly technical systems, some of these NDT techniques can be used for reinforcing steel rebar location in concrete bridge decks without destruction of the members being tested. Use of these techniques has the ability to minimize traffic restrictions related to field data collection and to improve design and asset management.

Rebar detector is one of the NDT, which are used to locate the steel bar embedded in concrete before drilling and before taking core test.

- It is the easiest and fastest ways for detecting reinforcing bar in concrete. It is widely used before coring or drilling holes to find “safe spots”.
- It will indicate rebar location, direction and also will give an indication of the depth of concrete cover.

Currently, there are many players in this market. HILTI, Bosch, Proceq, Elcometer, ZBL and some others are playing important roles in Rebar Detector industry, with about 64% market shares.
