The global Rebar Fabrication market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Rebar fabrication refers to the process used in reinforced concrete (RC) construction to strengthen concrete in building frames. Rebars are available in 12 different thicknesses (D10 to D51) and are made from rolled steel with surface ribs.

Reinforcing steel bars are used in buildings, with specifications varying by location. The construction process involves assembling steel bars in foundations, columns, beams, walls, and floors. Columns feature vertical and horizontal bars with hoop wrapping, while floors use main bars and reinforcement bars. Bar intersections are secured with wires.
