In 2025, global sales of Rebar Shredders were approximately 450 units, with an average global market price of around USD 150,000 per unit. The gross margin of major manufacturers in the industry was approximately 25%-40%. A Rebar Shredder is a specialized piece of equipment used for shredding and size reduction of scrap rebar, metal bars, construction demolition steel scrap, and other long metal materials. It typically adopts low-speed, high-torque cutter shafts to cut, tear, and compress bent, bundled, or irregular rebar into smaller sizes, facilitating subsequent sorting, baling, transportation, and remelting. Its upstream sector mainly includes alloy cutters, cutter shafts, reducers, motors, hydraulic systems, bearings, structural steel frames, electrical control systems, and wear-resistant components. The midstream sector involves structural design, cutter shaft machining, transmission system integration, complete machine assembly, and commissioning of Rebar Shredders. The downstream sector mainly serves metal recycling companies, waste treatment enterprises, and construction demolition companies. Overall, the value of Rebar Shredders lies primarily in improving scrap rebar processing efficiency, reducing transportation and manual sorting costs, and enhancing the resource utilization of scrap metal.
