The global Recessed Filter Presses market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Recessed Filter Presses have a recess in each plate with beveled edges where the filter cake forms within this recess of the chamber. Recessed Filter is a solid plate made of plastic, metal, etc. These plates have recessed surfaces, except for the peripheral surface, which allows the plates to seal against each other when hydraulic rams are used to clamp the plates together. When the plates are held tightly together, all dewatering is done by squeezing through the slurry feed pump. Recessed Filter Presses are widely used in solid-liquid separation processes in chemical, food, metallurgical and other industries. It can handle many types of solid-liquid mixtures, such as suspensions, sludges, slurries, etc., and achieve solid dehydration and liquid clarification.
