The hepatitis b vaccine is a vaccine against hepatitis b. That is, from hepatitis b virus carrier plasma isolation of hepatitis b surface antigen (HbsAg), after treatment and made. After second liver vaccine is inoculated, can stimulate immune system to produce protective antibody, this kind of antibody is in the humoral in the person, once second liver virus appears, antibody can act immediately, clear its, prevent infection, won't harm liver, make human body had the immunity that prevents second liver thereby. Therefore, hepatitis b vaccine has become an indispensable umbrella in life. Prevention generally lasts for at least 12 years, so there is no need for anti-hbs surveillance or enhanced immunity in the general population. However, anti-hbs surveillance can be carried out on high-risk groups, such as anti-hbs
